                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a single chain FV (scFV) derivative of antibody 193/AD3, comprising the heavy (VH) and light (VL) chain or variable regions of 193/AD3 joined by an artificial, flexible linker peptide. The scFV was obtained by PCR amplification of cDNAs for comprising the vector pDAP2. 193/AD3 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIX) and their derivatives, and example of anti-human Factor IX (FIX)/activated Factor IX (FIX) and contivatives, and their derivatives, contributies of the invention. Anti-FIX/FIX and their derivatives, concluding scFv and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor activity or FIXa activating activity. Administration leads to an increase in the proceagulant activity of FIXa, even in the presence of foreign and their presence continuous in the case of FVIII or FVIII or FVIII and inhibitors. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating patients with blood compulation disorders, especially haemophilia A and haemorrhagic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

CDMAs encoding the VL and VH regions of 4197X (AAQ85387-88, respectively) were obtained from hybridoma mRNA, amplified by PCR, and engineered for inclusion in the immunotoxin construct (AAQ85386).
                                                                                                                                    31.1 antibody; pancreatic cancer; light chain variable region.

Use of anti-VLA-4 antibodies e.g. HP1/2, HP2/1, HP2/4, L25
P4C2 antibodies - for inhibiting late phase response to all
                                                                                                                                                                                                                                                                                                                                                                                                                            WO9313798-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Monoclonal antibody; allergen; light chain; asthma; VLA-4; very late antigen; hypersensitivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAR39818
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              light and heavy chain variable regions of the antibody 31.1. Seques of the invention are useful in expressing chimerised 31.1 antibodic which can be used for treating pancreatic cancer or for diagnosing pancreatic carcinoma. They are also used in antibody therapy. The pancreatic carcinoma is chimeric 31.1 antibody light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid encoding light and heavy chain variable regions of antibody 31.1, useful for expressing chimerized 31.1 antibodies for treating pancreatic cancer or for diagnosing pancreatic carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HP1/2 Vk.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           25-MAR-2003

Anti-VLA-4 antibody = anti-very late antigen-4 antibody. One anti-
VLA-4 monoclonal antibody is designated HPI/2 (obtained from Biogen
Inc. Cambridge, MA). The variable regions of the heavy and light
chains of the anti-VLA-4 antibody HPI/2 were cloned, sequenced and
expressed in combination with constant regions of human,
immunoglobulin heavy and light chains. Such a chimeric HPI/2
antibody is similar in specificity and potency to the murine HPI/2
antibody, and may be useful in methods for treating ulcerative
                                                                                                                                                                                                                                                                                                     Treatment of inflammatory bowel disease - using anti-very antigen-4 antibody, polypeptide or other molecule recognia anti-very late antigen-4, reducing acute inflammation in ulcerative colitis, Crohn's disease, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Asthma is treated by admin. of an anti-VLA (very late antigen)-4 antibody, esp. monoclonal antibody HP1/2. The antibody is able to bind to the alpha 4 subunit of VLA-4 so as to (a) inhibit late phase response to an allergen to which the subject is hypersensitive or (b) decrease airway hypersensitivity after allergen challenge.                                                                                non-human complementarity determining regions at VH positions 31-35 (CDR1), 50-65 (CDR2) and 95-102 (CDR3). It may further comprise non-human residues at framework positions 27-30, 75, 77-79 or 66-67, or 69-71 and 69-71, or 84-85, or 38 and 40 or 24. The VL of the rAb has non-human CDRs at positions 24-34 (CDR1), 50-56 (CDR2) and 89-97 (CDR3). It may allso have non-human residues at framework positions 60 and 67. The non-human CDRs are pref. derived from the HP1/2 murine monoclonal antibody. HP1/2 is a member of Kabat V with no unusual residues. The rAb can be used to treat inflammation in mammals, esp. asthma or inflammatory bowel disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Humanised; human; mouse; recombinant; antibody; anti-VLA4; heavy; light; variable; framework; rAb; monoclonal; CDR; HP1/2; asthma; CDR; complementarity determining region; inflammatory bowel disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              colitis, Crohn
bowel disease.
                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the HP1/2 antibody kappa chain variable region (Vk). This protein sequence was used in the production of a humanised recombinant anti-VLA4 antibody (rAb). The humanised rAb comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Recombinant and humanised anti-VLA4 antibodies - contgnon-human CDRs in their light and heavy chains, used to (non-) specific inflammation, e.g. asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Carr FJ,

                                                                                                                                                                                                                                                                                     The present sequence represents the light chain variable region of the murine anti-human very late antigen-4 (VLA-4) monoclonal antibody HP1/2. The protein can be used in the method of the invention. The specification describes methods for treating inflammatory bowel disease with a composition comprising an antibody, or its fragments, able to bind to the Bi or B2 epitope of the alpha 4 subunit of VLA-4. The method is useful for treating ulcerative colitis and Crohn's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is the anti VLA-4 antibody HP1/2 VK chain. The invention relates to a method for the treatment of insulin-dependent type I diabetes, comprising administering to a prediabetic mammal (or on showing partial beta-cell destruction) one or more compositions of an antibody that binds to the alpha 4 subunit of VLA-4 (very late antigen-4), its antigen-binding fragments, or a soluble VCAM-1 (vascular cell adhesion molecule-1) polypeptide that binds to the alpha 4 subunit of VLA-4. The treatment is used to prevent development of

This antibody binds alpha 4 beta 1 integrin very late antigen 4 (VLA-4). The antibody can be used in methods to treat chronic allergen-induced asthma. Inhibition of VLA-1 eukocyte migration prevents secondary effects of leukocyte infiltration (release of toxins, inducers of soluble inflammatory cell mediators or chemotactic agents) and inhibition of signal transduction causing release of such mediators and chemotactic agents.
                                                                                        Integrin antagonist; VLA-4 antagonist; alpha-4-beta-1 integrin; very late antigen; monoclonal antibody HP1/2; mouse; murine; kidney disease; chronic renal failure; end-stage renal disease; chronic diabetic nephropathy; diabetic glomerulopathy; diabetic renal hypertrophy; hypertensive nephrosclerosis; hypertensive glomerulosclerosis; chronic glomerulonephritis; hereditary nephritis; renal dysplasia; nephrotropic; light chain variable region; VL.

                                                                                                                                                                                                                                                                                                     RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method for treating a mammal with, cor at risk of developing, chronic renal failure, involving the administration of at least one integrin antagonist. The integrin companists that may be used in the method include antagonists of alpha-4-subunit containing integrins or antagonists of alpha-1-subunit containing integrins or antagonists are antibodies specific for VLA-1 (very late antigen-1, alpha-1-beta-1 integrin) or VLA-4 (alpha-4-beta-1 integrin) which inhibit the interaction of the contegrin and its cognate ligand (collagen I, collagen IV, and laminin in the case of VLA-1, and fibronectin and VCAM-1 in the case of VLA-4).

The method of the invention may be used to treat chronic renal failure, collager renal disease, chronic diabetic nephropathy, diabetic collager collager in the case of VLA-4, and disease, chronic diabetic nephropathy, diabetic collager stage renal disease, chronic glomerulopathy, diabetic collager stage renal dysplasia. The present sequence represents the light collapse to renal dysplasia. The present sequence represents the light collapse to the case of VLA-4 (alpha-xegion (VL) of the murine anti-VLA-4 monoclonal antibody collapse to the case of vLA-4).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to treating inflammatory bowel disease (IBD), comprising administering to a mammal suffering from IBD a composition comprising a vascular cell adhesion molecule (VCAM)-1)/immunoglobulin G (IgG) fusion protein in an amount effective to provide relief to the mammal. Antibodies against VLA-4 (alpha4betal integrin, a binding partner for VCAM-1) may also be effective in treating IBD. The method is useful for treating inflammatory bowel disease in a mammal, preferably a human suffering from ulcerative colitis or Crohn's disease (both are chronic inflammatory diseases). The composition is administered during an acute flare-up of the inflammatory bowel disease. The fusion protein is termed VCAM 2D IgG and comprises 2 N-terminal domains of VCAM-1 fused to the bresent sequence represents the kappa chain variable regions of a mouse monoclonal antibody HPI/2 which recognises VLA-4 and may be of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAQ70612 codes for human interleukin-6 binding inhibitor, the polypeptide described in AAR56612. This polypeptide hibits the binding of human II-6 to its receptor, and can therefore be useful in the treatment of a variety of autoimmune diseases; specifically in the treatment of rhounatoid arthritis, septic shock due to bacterial infection and multiple myeloma. (Updated on 25-MAR-2003 to correct PN field.)
